epideral growth factor receptor homolog precursor - fluke (Schistosoma mansoni)
N;Contains: protein-tyrosine kinase (EC 2.7.1.112)
C;Species: Schistosoma mansoni
C;Date: 10-Sep-1999 #sequence_revision 10-Sep-1999 #text_change 09-Jul-2004
C;Accession: A5558; S27836

C;Complex: Laminins are trimers of an alpha-type, a beta-type, and a gamma-type laminin C;Function:
C;Function:
A;Description: interact with cells and with other basement membrane proteins to promote C;Superfamily: laminin G repeat homology; laminin-type EGF-like homology
C;Keywords: basement membrane; cell binding; coiled coil; extracellular matrix; glycoprof; P;12-4/Domain: signal sequence #status predicted coil; extracellular matrix; glycoprof; F;25-1816/Product: laminin alpha-4 chain #status predicted cMAT>

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A) Description: broad specificity endopeptidase and peptidyl dipeptidase
A) Description: broad specificity endopeptidase and peptidyl dipeptidase
A) Pathway: intracellular protein degradation
C) Superfamily: papain
C) Superfamily: papain
C) Reywords: cysteine proteinase; glycoprotein; hydrolase; lysosome; protein degradation
E) 1-17/Domain: signal sequence #status predicted <NBT>
E) 80-339/Product: cathepsin B #status predicted <NBT>
E) 819.192/Binding site: carbohydrate (Asn) (covalent) #status predicted
E) 93-122,105-150,141-207,422-146,179-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-2111,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-211,187-

Martienssen, R.; McCombie, M.; Lodhi, M.; Hoffman, J.; Hasegawa, A.; Gnoj, L.; Gott Martienssen, R.; McCombie, W.
A.Description: The sequence of the Arabidopsis thaliana T10M13 BAC.
A.Reference number: Z14346
A.Accession: T01519
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A;Status: preliminary; translated from GB/EMBL/DDBJ

NyAlternate names: coat polyprotein
NyAlternate names: coat polyprotein
NyContains: surface glycoprotein gpl20; transmembrane glycoprotein gp41
C;Species: human immunodeficiency virus type 2, HIV-2
A;Note: host Homo sapiens (man)

CiAccession: T29488
R; Pauley, A.; Gattung, S.
Submitted to the EMBL Data Library, September 1996
A; Description: The sequence of C. elegans cosmid M01H9.
A; Reference number: Z20626
A; Description: T39488
A; Status: preliminary; translated from GB/EMBL/DDBJ
A; Residues: 1-399
A; Molecule type: DNA
A; Residues: 1-389
A; Residues: UNIPROT: Q95018; UNIPARC: UPI000007DA14; EMBL: U70853; PIDN: AAB09143.1;

Hatzoglou A., Taspis A.,

Thoue J.-I., Devergine O., Taspis A.,

TINE receptor family member ECMA (B cell maturation) associates with

TNF receptor associated factor (TRAF) 1, TRAF2, and TRAF3 and

activates NF-kappa B, elk-1, c-Jun N-terminal kinase, and p38 mitogen-
activated protein kinase.

Translocation t(4,16) (qS6;pl3) with l12. SIMILARITY: Contains 1 TNFR-Cys repeat.
"B cell maturation protein is a receptor for the tumor necrosis factor
                                                                                                                                                                                                                O9Y275:TNFSF13B; NbExp=1; IntAct=EBI-519945, EBI-519169;
-!- SUBCELLULAR LOCATION: Type III membrane protein. Plasma membrane and perinuclear Golgi-like structures.
-!- TISSUE SPECIFICITY: Expressed in mature B-cells, but not in T-
                      family member TALL-1.",

Proc. Natl. Acad. Sci. U.S.A. 97:9156-9161(2000).

-!- FUNCTION: Receptor for TRF8F13B/BLyS/BAFF and TNFSF13/APRIL.

Promotes B-cell survival and plays a role in the regulation of humoral immunity. Activates NF-kappa-B and JNK.

-!- SUBUNIT. Associates with TRAFI, TRAF2, TRAF3, TRAF5 and TRAF6.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Breakpoint for translocation to form IL2/TNFRSF17 oncogene.
